Update on CCCE and Roadmap on Access and Affordability

March 28, 2023

CIRM
CALIFORNIA'S STEM CELL AGENCY

- Community Care Centers of Excellence
- Roadmap on Access and Affordability

- Small group discussions intended to inform the development of CCCE Concept Plan.
- Three sessions: San Joaquin Valley (Clovis/Fresno), Inland Empire (Riverside), Coachella Valley (Palm Desert).
- Discussion themes include (1) capacities to support clinical research, (2) workforce education and training needs, and (3) resources to support patient/community outreach, education and engagement.
- 53 participants including: health care providers, elected officials, community-based organizations and patient advocates.

- Clinical sites have partnerships with CIRM-funded academic centers and research experience.
- Providers and patient advocates want to be part of the “CIRM experience.”
- CBOs and elected officials emphasize the need to build relationships and trust (relational engagement not transactional or paternalistic).
- Create opportunities for innovative communications using non-traditional messengers (e.g., draw on younger generations in CIRM training programs).

Why are we doing this?

Proposition 14 charges the ICOC, based on recommendations from the AAWG, with developing policies and programs to make treatments and cures arising from CIRM research available and affordable.

The roadmap will include a strategy for gathering data and information to support reimbursement, a plan to engage policymakers and regulators and the development of novel healthcare delivery models through the Alpha Clinics and Community Care Centers of Excellence.

 **DELIVER A ROADMAP FOR ACCESS AND AFFORDABILITY OF REGENERATIVE MEDICINE FOR ALL CALIFORNIA PATIENTS**

Facilitate Reimbursement and Limit Patient Expenses

Support New Payer Models

Address State Policy Issues

Build Clinical Resources

Patient Support Services
Alpha Site Coordination and Alignment
Patient Navigator at CCCEs
Coverage Analysis, Insurance Support, Co-Pay Assistance, Access and Appeals

Engagement with Payers
Performance-Based Models
Introduce New Payer Mechanisms for Orphan Products
Risk Pools/Coalition Partners

Creation and/or endorsement of new State policy for C&GT
Treatment across state lines
Inpatient vs. Outpatient reimbursement
Align to Gov Plan on Office of Health and Affordability

Alpha Clinics and CCCE
Patient and post-marketing Registries and Data (RWE, HEOR)
Accelerate Advocacy at community level; Medical Education
State and Federal authorized treatment centers

How are we approaching the Roadmap to Access and Affordability?

We are approaching the roadmap as a 5-year plan.

We will have specific concept plans for the next 5 years to ensure these roadmap concepts are completed.

During this 5-year plan, we are also going to acquire additional information to create a more robust program.

Examples of activities we need to enable access and affordability

These are the activities we are going to undertake:

- Engage With Payers and other Key Stakeholders
- Conduct Landscape Research on CGT-related Policy Issues
- Aggregate and Analyze Available Real-world Data
- Set Goals for Each Roadmap Activity
- Develop Metrics to Assess the Progress of Programs

Thank you and Discussion
